WORK EXPERIENCE

MADverse Music

Full Stack Developer (Intern + Fulltime) (NextJS, TRPC, Prisma, drizzle, MySQL) Apr 2023 - Present

- Built multiple features affecting 1,50,000+ users.
- Heavily worked on AI, LLM Based solutions for quality assurance on Music Metadata using N8N, Pinecone, Gemini LLMs. Built a scalable system for continuous AI QC System
- Built multiple automation scripts/workflows for data consistency across multiple platforms and servers.
- Efficiently used Serverless Technologies such as PlanetScale, Vercel, Upstash.
- Improved and optimized Royalty Ingestion Logic by 60-80%
- Built and deployed several microservices on the Hetzner Cloud, AWS, Modal.com
- Used Docker, Docker compose, to deploy several applications on Coolify.
- Worked with Timescale DB, postgres, sqlite, MySQL, AWS Lambda

Reunion

Frontend Development Intern (Typescript, Gatsby JS, Graphql, Strapi) Nov 2022 - Feb 2023

- Developed a comprehensive UI Component Library with ReactJS, published as an npm package, that increased development speed by 40% and used Storybook for state visualization
- Wrote extensive unit tests on Jest and React Testing Library.
- Worked with Strapi API to integrate data and styling into the website. Used GraphQL to efficiently query data and used Mustache to transform json.

PROJECTS

Syraa - Local AI Agent Harness (github.com/SayarB/syraa) Aug 2026 - Present

TypeScript, React, Vite, Node.js, PostgreSQL, Redis, Python, Docker, Better Auth, Langfuse

- Built an AI agent harness with chat, durable memory (preferences, rules, methods, decisions stored in Postgres) and PDF context ingestion, as a TypeScript monorepo with a React UI, an API and a Python ingest worker.
- Designed the PDF ingest pipeline: upload, Redis queue, Python worker (bookmarks, printed TOC and heading heuristics), then topics and chunks in Postgres, plus an AI summary per document that the chat prompt uses instead of every section title.
- Added Langfuse tracing (one trace per chat turn and per document ingest), Google and magic-link sign-in with Better Auth, Docker Compose deployment to a VPS with Dokploy, and tests with Vitest and pytest.

Cimmy - Repo-Connected Agent Ops Platform Sep 2026 - Present

TypeScript, Node.js, pnpm monorepo, Docker, Sysbox, GitHub App, Better Auth

- Built a platform that connects GitHub repositories and runs in-repo .cimmy skills inside ephemeral Cursor agent containers, with a web UI, API, worker and scheduler.
- Designed the isolation model: a separate broker is the only holder of the Docker socket, runs execute under Sysbox as a non-root user with hard CPU, memory and PID limits, and containers receive only short-lived GitHub installation tokens.
- Built a CLI to scaffold and validate skills for any project.

SKILLS

AI & Agents: Vercel AI SDK, Mastra, MCP (servers and clients), tool-calling agents, RAG, Pinecone, LLM evals, Langfuse, n8n
Languages & Frontend: TypeScript, JavaScript, Python, Go, SQL, React, Next.js, Vite, Tailwind CSS, shadcn/ui, tRPC, TanStack Query
Backend & Data: Node.js, Hono, Fastify, Drizzle, Prisma, PostgreSQL, MySQL, ClickHouse, Redis, BullMQ, Better Auth, OAuth, Stripe
Infra & Tools: Docker, AWS, Dokploy, Coolify, Vercel, GitHub Actions, Tailscale, Sentry, Turborepo, Vitest, Playwright, pytest, Git
Also used: Java, Django, MongoDB, Firebase, Socket.io, Redux, Material UI, GraphQL, Zustand, Postman

EDUCATION

Vellore Institute of Technology 2021 - 2025

BTech., Information Technology CGPA = 9.03

VOLUNTEERSHIP EXPERIENCE

GDSC (Google Developer Student Clubs) VIT Vellore

Inner Core Committee Member Mar 2022 - Present

- Helped Organize events such as Women Techies ‘22, and Devjams ‘22.
- Was an Integral part of Building the GDSC Website
- Contributed on the Website of Women Techies ‘22, Deconstru.ctf ‘22.
